```

1. PRD.md

```
# Product Requirements Document (PRD)

## Prompt

Act as a senior product manager with experience in early-stage startups.

I am building an app and I want you to create a detailed Product Requirements Document (PRD) for it.

The document should cover:

## 1. Product Overview
- What the app does
- Vision and mission

## 2. Target Users
- Who the app is for
- Primary and secondary user personas

## 3. Problem Statement
- What problem the app solves
- Why existing solutions are insufficient

## 4. Goals and Success Metrics
```

- Business goals
- User goals
- KPIs

5. Core Features

- Detailed feature descriptions
- Must-have vs Nice-to-have
- User stories

6. User Journey

- End-to-end user flow
- Edge cases

7. MVP Definition

- Exact v1 scope
- Excluded features

8. Functional Requirements

- Backend requirements
- Frontend requirements
- API requirements

9. Non-Functional Requirements

- Performance
- Scalability
- Security
- Reliability

10. Technical Recommendations

11. Analytics and Evaluation

12. Risks and Assumptions

13. Out of Scope

Present in a format suitable for founders and engineers.

2. TECHNICAL_ARCHITECTURE.md

Technical Architecture Document

Prompt

Act as a senior software architect who has built and scaled multiple SaaS products.

Create a complete Technical Architecture Document.

Include:

1. System Overview

- Architecture diagram
- Components

2. Recommended Tech Stack

Explain:

- Why chosen
- Pros/cons
- Scalability

Cover:

- Frontend
- Backend
- Database
- Authentication
- Cache
- Queue
- Storage
- AI orchestration
- Vector DB
- Deployment
- Monitoring

3. Project Structure

4. Database Design

For each table:

- Fields
- Types
- PK/FK
- Relationships
- Indexes

5. API Design

6. Environment Variables

7. Configuration Notes

8. Security Architecture

```
## 9. Scalability Strategy

## 10. Observability

## 11. Cost Optimization

Present in implementation-ready format.
```

3. SECURITY_ACCESS.md

```
# Security and Access Document

## Prompt

Act as a senior security engineer specializing in early-stage products.

Write in plain English.

Include:

## 1. Security Overview

## 2. Authentication Strategy
- Login method
- MFA
- Session management
- Password reset

## 3. Authorization
Define:
- Roles
- Permissions
- Restrictions

## 4. Row-Level Security
For each table:
- Read rules
- Create rules
- Update rules
- Delete rules

## 5. API Security
- Authentication
- Rate limiting
```

```
- Validation
- CORS

## 6. Data Protection
- Encryption
- Secrets
- Backups

## 7. Error Handling Guide
Cover:
- Login failures
- Upload failures
- API failures
- DB failures
- Network failures

## 8. Edge Cases

## 9. Abuse Prevention

## 10. Monitoring

## 11. Out-of-Scope Security Features
```

4. FRONTEND_SPECIFICATION.md

```
# Frontend Specification Document

## Prompt

Act as a senior UI/UX designer and frontend architect.

Create a complete Frontend Specification Document.

Include:

## 1. Design Principles

## 2. Design System

### Colors
- Primary palette
- Secondary palette
- Neutrals
```

- Status colors
- Dark mode

Typography

- Fonts
- Sizes
- Weights

3. Layout System

- Grid
- Breakpoints
- Spacing

4. Component Specifications

Define:

- Buttons
- Inputs
- Cards
- Modals
- Tables
- Alerts
- Chat UI

5. Screen Specifications

6. State Management

7. Frontend Folder Structure

8. API Integration Specs

For each endpoint:

- URL
- Method
- Request
- Response
- Errors

9. Third-Party Integrations

10. Performance Requirements

11. Accessibility

12. Animation Guidelines

13. Out-of-Scope Features

5. FEATURE_TICKETS.md

```
# Feature Ticket List

## Prompt

Act as a senior engineering lead.

Break the PRD into buildable tasks.

Organize by epics.

For each ticket include:

## Ticket Template

### Ticket ID
FEAT-001

### Feature Name

### Priority
- Must-Have
- Should-Have
- Nice-to-Have

### Objective

### Detailed Requirements

### Acceptance Criteria
- User can...
- System should...
- API returns...

### Dependencies

### Technical Notes
- Files
- Endpoints
- DB changes

### Testing Requirements
- Unit tests
- Integration tests
```

- Manual tests

AI Coding Prompt

Generate a ready-to-use prompt for Cursor/Claude/Codex.

Suggested Epics:

EPIC 1: Project Setup

EPIC 2: Authentication

EPIC 3: Core Features

EPIC 4: Frontend

EPIC 5: Security

EPIC 6: Observability

EPIC 7: Deployment
